LAS LLAMAS

Themed ride for family.

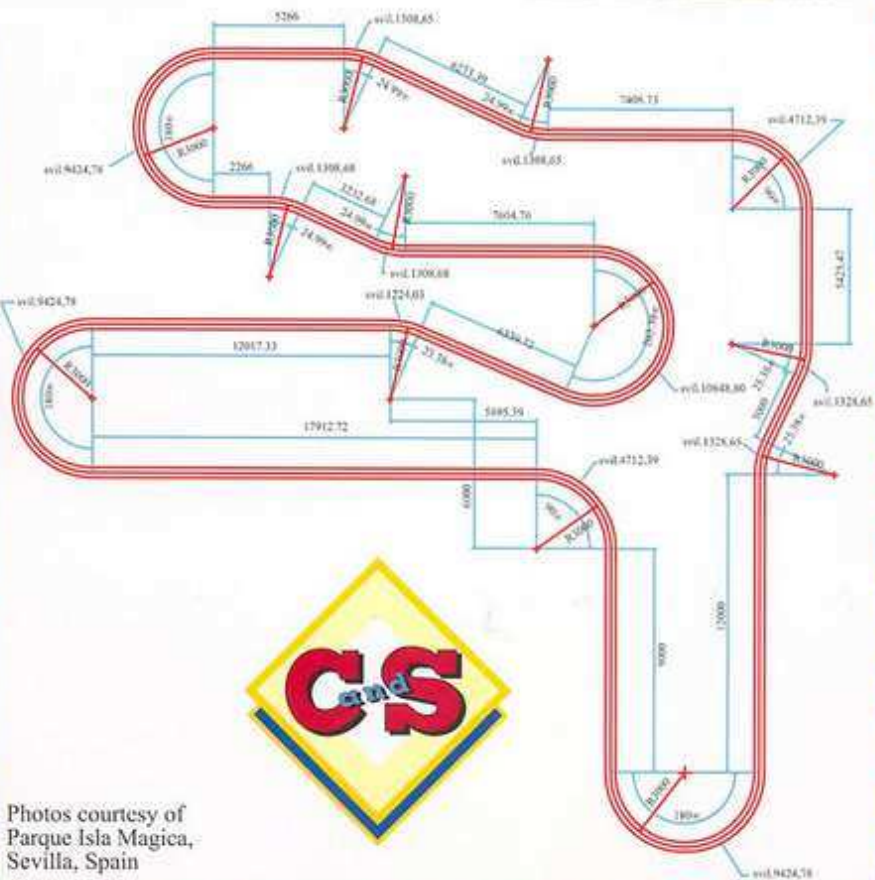

Brightly coloured llamas run along a panoramic track carrying on their back two passengers (one adult and one child) in a smooth trip on the high mountains of South America.

Each llama is self-powered by a DC electric motoreducer, photocell anti-collision system and features a soft up-and-down movement. DC power is supplied by a transformer and rectifier unit complete of operator's control panel.

Llamas ride is suitable for both outdoor and indoor installation, track layout is customized to fit area available. Fibreglass body can also be themed with other animals such as camels or horses or with customer own subject.
